

## Multidiameter fast flow drain kit with 90° elbow

This model is particularly suitable for vertical pipes. In this case it is also advisable to insert the anti-syphon unit before the non-return valve.

The "multi Ø" drain saddle (for pipes ranging from 30 to 42 mm.) was made with a Ø 20 evacuation hole to cope with the tendency of European washing machine factories to shorten drain times with a greater water outflow; it is also equipped with 2 hose connectors for outlet hoses with internal hole of mm. 16 and mm. 20 respectively.
