

POLYPROPYLENE SHOWER HEADS

INSTALLATION

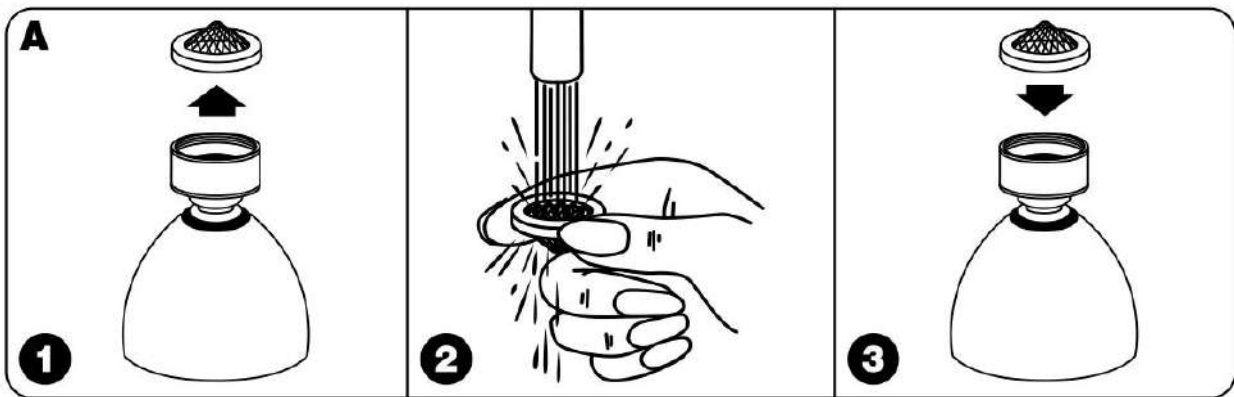

Provided with **brass swivel diameter 1/2" Female**, it fits the most common shower arms and it represents a valid and economical alternative to the expensive chromed brass shower heads, ensuring a long last in a perfect efficiency.

FUNCTIONALITY

Very economical and sturdy, it guarantees the comfort of a full and effective jet and is particularly suitable for sports facilities, swimming pools and beach resorts.

Like all our products, it is equipped with **stainless steel screenwasher** which retains the solid impurities (sometimes present in the water) and avoids clogging of the shower head.

MAINTENANCE

To keep the shower head always in perfect conditions (even in case of irregular flow), clean the special stainless steel screenwasher.

1. Unscrew the shower head;
2. remove the screenwasher and rinse it with water;
3. replace the screenwasher.

If you notice limescale deposits or an irregular flow, soak the shower head in vinegar or an anti-limescale product for a few hours, brush off the residues and rinse: it will be as good as new.

REMOVABLE WATER-SAVER

The shower head is part of our product line “**Save the blue gold**”, aimed at promoting the water saving.

The package includes a **flow restrictor** which, inserted under the screenwasher, allows (depending on the flow and pressure conditions) **to save up to 40% of water**.
